

# LED ON-BOARD LIGHTING

High speed photography on-board lighting  
for in-vehicle or sled applications

*New*

## Features & Benefits:

- Proprietary high-output LED system designed and stress tested specifically for in-vehicle and sled applications
- Static tested to 100G
- High intensity system provides 10,000 lux, at 300mm distance, over a full 300mm x 300mm target for filming even the darkest areas
- Instant ON/OFF, with the ability to remain on for up to 30 minutes, offers increased application flexibility
- Compact size allows positioning in “cluttered” areas where fill lighting is needed most; 3.5in W x 1.75in H x 4.5in D
- Extremely low power (26W) allows multiple units to be used in-vehicle or on sleds without need for heavy cables or power systems
- Very low heat output ensures against negative heat affects on crash dummies and test material
- Stand alone unit makes this a very affordable solution
- 12V / 24V with battery option for additional portable power flexibility
